GUIDE

① What this sheet practises

Naming coins and bills and knowing what each is worth: a penny is 1¢, a nickel 5¢, a dime 10¢ and a quarter 25¢. Your child also trades one for smaller ones.

② A problem from the sheet, worked out

What is it worth? Write how many.

A nickel is worth **5** pennies

A dime is worth **2** nickels

A \$10 bill is worth **2** \$5 bills

A dime is worth **10** pennies

A \$5 bill is worth **5** \$1 bills

A dime is worth **10** ¢

How: Know each value first. To find how many small ones make a big one, count up by the small one's value: a dime is 5, 10, so 2 nickels.

③ Words to know

penny 1 cent

nickel 5 cents

dime 10 cents

quarter 25 cents

④ Watch for

- Thinking a nickel is worth more than a dime because it's bigger.
- Counting coins instead of their value: 3 dimes beats 2 quarters.
- Mixing up the \$5 and \$10 bills, or the penny and the nickel.

⑤ Where it fits

THIS SHEET

1.GR.C.6

Name coins and bills and know what each is worth.

NEXT

2.MD.C.8

Solve money problems with dollars, quarters, dimes, nickels and pennies.

⑥ Helping at home

Empty a coin jar and sort the coins by kind. Ask your child to name each pile and trade, like 5 pennies for a nickel.
